The NLR polynucleotide and protein can be used to isolate compounds that bind, (ant)agonise or alter the activity or expression of the NLR. The NLR is a G-protein coupled receptor which is expressed in the central nervous system and shares homology with human neurotensin receptor. The receptors can be used in assays to identify agents for producing anasthesia and analgesia.

      Identifying predicted or actual structures of two chemical or physical library by mass spectrometry correlating molecular mass measurements of two or shared chemical history -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence represents a human TGR-1 protein. The specification describes a method of screening a compound, which is capable of binding properties of neuromedin U to TGR-1. The method is useful for screening preventatives and remedies for hypertension, stress diseases, etc.. TGR-1 antagonists are also useful for treating the same diseases.

The specification describes a method of screening a compound, which is capable of binding properties of neuromedin U to TGR-1. The method is useful for screening preventatives and remedies for hypertension, stress diseases, etc.. TGR-1 antagonists are also useful for treating the same diseases.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to human G-protein coupled receptors, SNORF62 and SNORF72 and their corresponding cDNA molecules. SNORF62 and SNORF72 creceptors are specific for neuromedin U (NMU) neuropeptides, hence they are also known as NMU receptors. The agonist and antagonist of NMU receptors are useful for treating an abnormality in a subject that is alleviated by decreasing or increasing the activity of NMU receptor. The NMU receptors serves as a valuable tool for designing drugs which are useful for treating various pathophysiological conditions such as inflammation, arthritis, autoimmune diseases, transplant rejection, graft vs host disease, bacterial, fungal, protozoan and viral infections, septicaemia, AIDS, pain, psychotic and neurological disorders, including anxiety, depression, schizophrenia, dementia, mental retardation, memory loss, epilepsy, neuromotor disorders, respiratory disorders, asthma, cating/pody weight disorders including obesity, bulinia, diabetes, and disorders, ischaemia, stroke, cancers, sexual disorders, circadian disorders, renal disorders, troke, cancers, sexual disorders, circadian

          coupled receptor designated IGS4B. IGS4 exists in two polymorphic forms, IGS4B and IGS4B. The IGS4 receptors and IGS4 polynucleotides are useful for preventing, ameliorating or correcting dysfunctions or diseases. These diseases include peripheral nervous system, psychiatric and central nervous system disorders (e.g. schizophrenia, episodic paroxysmal anxiety, phobia, Parkinson's disease, migraine, epilepsy, bulimia or stroke), cardiovascular diseases (e.g. heart failure, angina pectoris, myocardalal infarction or hypertension), dyslipidemias, obesity, emesis, gastrointestinal disorders (e.g. inflammatory bowel disease or motility disorders), osteoporosis, inflammatory importance (e.g. bacterial, fungal, protozoan or viral), pain, cancers, immune disorders, allergies,
                                                                                                                                                                                                                                                                                       New G-protein coupled receptors and the polynucleotides encoding them, useful for preventing, ameliorating or correcting nervous system disorders, cardiovascular diseases, dyslipidemias, inflammations, pain

opioid receptor mu variant MORIA - human
C;Species: Homo sapiens (man)
C;Date: 12-Jul-1996 #sequence_revision 26-Jul-1996 #text_change 05-Nov-1999
C;Accession: $65693; $51216
R;Bare, L.A.; Mansson, E.; Yang, D.
submitted to the EMBL Data Library, July 1994
A;Description: Expression of two variants of the human mu opioid receptor mRNA A;Reference number: $65693
A;Reference number: $65693
A;Rocession: $55693
A;Roceusetype: mRNA
A;Residues: 1-392 <BAR>

IT IS ASSOCIATED WITH G PROTEINS THAT ACTIVATE A PHOSPHATIDYLINOSITOL CALCIUM SECOND MESSENGER SYSTEM.
SUBCELLULAR LOCATION: Integral membrane protein.
SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS.
HIGHEST TO TACHYKININS RECEPTORS.

Stimulates growth hormone secretion. Binds also other growth hormone releasing peptides (GHRP) (e.g. Met-enkephalin and GHRP-6) as well as non-peptide, low molecular weight secretagogues (e.g. L-992,429, MK-0677, adenosine) (By similarity). SUBCELLULAR LOCATION: Integral membrane protein. SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             European Bioinformatics Institute.
